

shhMOOD

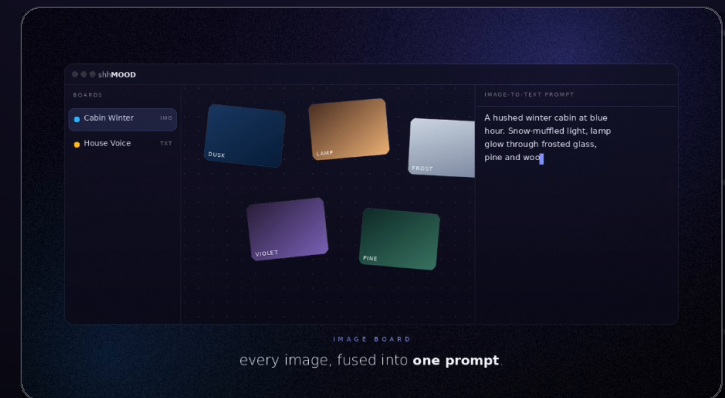

The moodboard that writes the brief.

A functional React app that turns image boards into cohesive generation prompts and text boards into reusable skill.md writing-voice profiles.

Image boards -> prompts

Text boards -> skill.md

Built MVP

Moodboards stop where the work begins.

Taste is easy to gather. It is hard to make executable.

References, notes, screenshots, and scraps pile up. The translation into a brief, prompt, or style guide still happens by hand.

01

Mood is subjective.

Teams point at the same board and leave with different words.

02

Prompts drift.

The same visual direction gets rewritten every time a model is used.

03

Voice is fragile.

Writing habits live in a person, not in a portable system file.

04

Handoffs leak intent.

Images, copy notes, and output instructions live in separate tools.

WHY NOW

Visual work, AI creation, and design literacy are converging.

AI tools are already inside creative and business workflows. The missing layer is controlled, portable creative direction.

88%

Organizations regularly use AI in at least one business function.

McKinsey State of AI 2025

68%

Businesses offer design training to non-design roles.

Canva Visual Economy Report 2024

90%

Creators said generative AI can save time and money and help create new ideas.

Adobe AI + Creative Frontier Study 2024

Opportunity: convert images and writing samples into creative instructions that can travel across models, projects, and teammates.

SOLUTION

shhMOOD translates inspiration into model-ready creative direction.

IMAGE BOARD

Drop reference photos. Each image is read for subject, composition, palette, texture, lighting, atmosphere, and style.

TEXT BOARD

Drop text or write notes. At 5+ samples, the board extracts voice, rhythm, diction, themes, and habits.

ONE PROMPT

A single fused image-to-text prompt that acts like a creative brief for visual models.

SKILL.MD

A reusable writing-style profile that can travel between AI tools, editors, and team workflows.

Not another place to collect references. A translation layer between taste and generative systems.

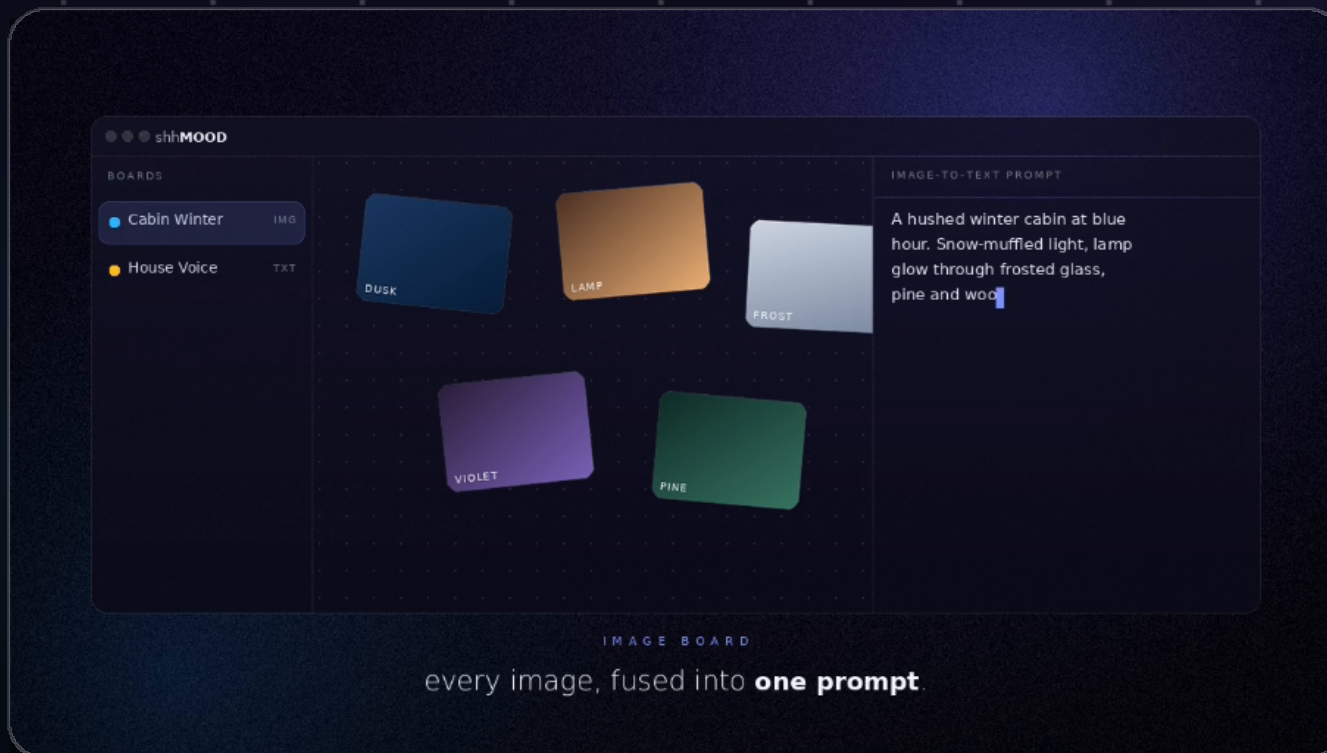

Claude

OpenAI

Gemini

Ollama

One workspace, two board types, live output.

BOARDS

New modal, Image or Text, left rail, rename and delete on hover.

CANVAS

Pan, zoom, drag items freely. Movement never re-triggers generation.

OUTPUT

Live prompt or skill.md, with copy/download and clear error states.

From many references to one cohesive prompt.

The image board does not caption photos one by one. It reads each reference, then fuses the set into a single prompt with shared mood and direction.

1 Drop images

Photos land on the infinite canvas.

2 Analyze each

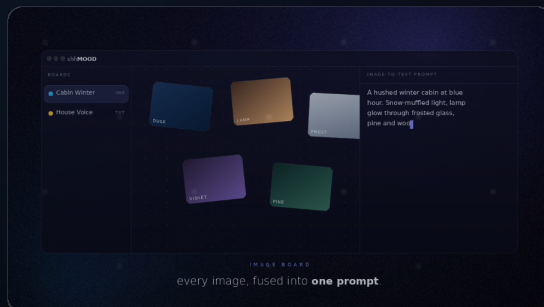

Model reads framing, palette, texture, lighting, mood, and style.

3 Synthesize

Analyses become one fused prompt.

4 Refresh on change

Add or remove content and the output re-synthesizes.

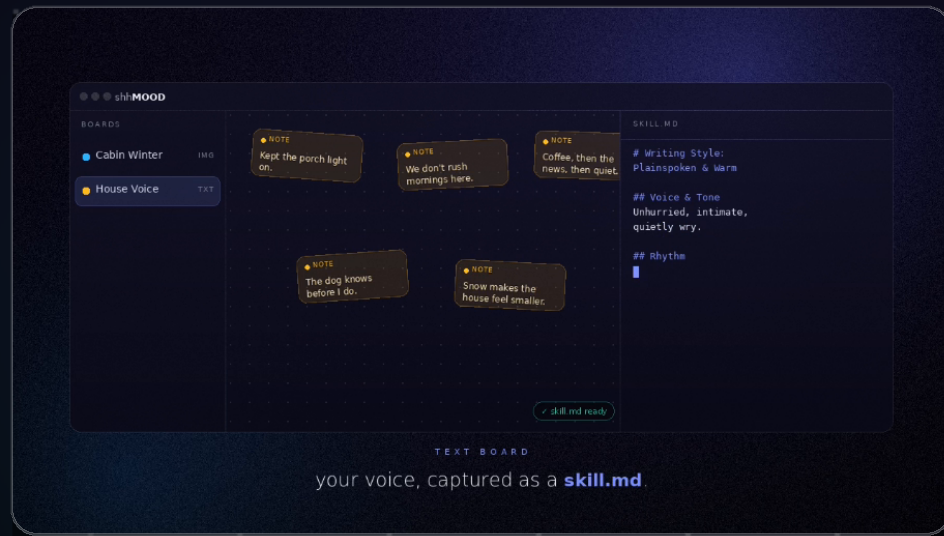

Prompt output

A hushed winter cabin at blue hour.
Snow-muffled light, lamp glow through frosted glass,
pine and woodsmoke. Muted indigo and amber.

Style keywords: cinematic, quiet, tactile...

Your writing voice becomes a reusable skill.

5+ notes minimum

Debounced edits

Copy or download

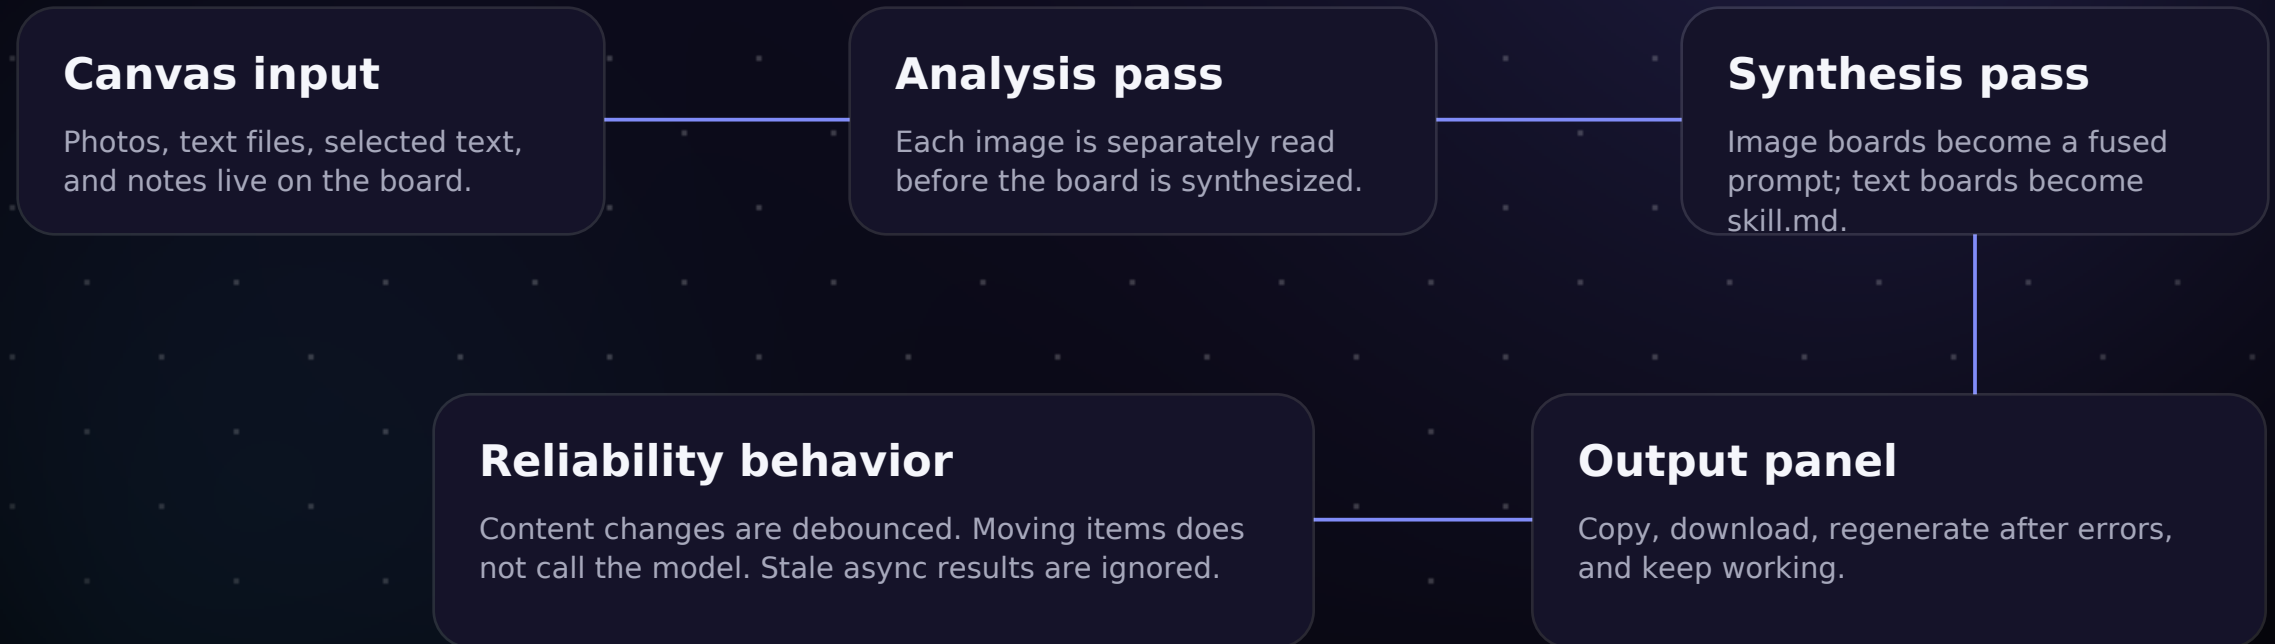

- Drop text files, selected text, or add editable notes directly on the canvas.
- Below five notes, the product shows progress instead of pretending it has enough signal.
- At five or more samples, it generates skill.md with voice, tone, rhythm, diction, themes, and habits.
- Every add, remove, or edit updates the file while stale async results are discarded.

```
# Writing Style: Plainspoken & Warm
```

```
## Voice & Tone
Unhurried, intimate, quietly wry.
```

```
## Rhythm
Short declaratives. One long breath, then a stop.
```

The MVP already handles the hard parts.

POSITIONING

The board is not the product. The extracted creative memory is.

REFERENCE TOOLS

Collect and arrange

Moodboards, whiteboards, and design tools gather taste, but they do not convert it into model instructions.

PROMPT TOOLS

Store the output

Prompt libraries preserve a finished string, often detached from the source material that created it.

SHHMOOD

Extract the pattern

shhMOOD turns source material into portable creative direction: a fused prompt or a skill.md profile.

PORTABLE

Outputs work across Claude, OpenAI, Gemini, Ollama, and local workflows.

STICKY

Boards become living references with useful output, not throwaway prompt drafts.

OPINIONATED

The product asks for enough signal before generating a voice file.

Start with AI-native creators. Expand into team creative memory.

BEACHHEAD USERS

- Solo AI creators building repeatable visual aesthetics.
- Art directors and creative strategists turning references into briefs.
- Brand, content, and social teams trying to keep output consistent.
- Writers and founders capturing a house voice without drafting a style guide.

HIGH-FREQUENCY USE CASES

Campaign look

Make one visual prompt from references.

Brand voice

Turn samples into skill.md.

Photo direction

Hand off mood with more precision.

Client handoff

Package style logic, not just examples.

Product-led wedge, then team workspaces and creative libraries.

REVENUE PATHS

- Pro subscription: saved boards, version history, richer exports.
- Team workspaces: shared prompt and skill libraries, roles, brand voice vaults.
- Agency / enterprise: client spaces, audit trails, managed model access.
- API: image-to-prompt and voice-to-skill endpoints for creative platforms.

ROADMAP

- Now: working React app, in-session boards, real model calls, provider configuration.
- Next: hosted persistence, accounts, import/export, prompt and skill version history.
- Then: collaboration, team libraries, Figma / Miro / Adobe export paths.
- Trust layer: rights-aware reference metadata and clearer source provenance.

Help make shhMOOD the default bridge between taste and tools.

- Recruit 10 design partners who build moodboards weekly.
- Run 100 creator and brand-team pilots around prompts and voice files.
- Stress-test model routing, persistence, and source-to-output history.
- Use the usage signal to shape the first paid Pro and Team plans.

The promise: take the quiet logic inside a moodboard and make it useful wherever creative work now happens.
